

# Three Quick, Easy, and Green Household Tricks

Cleaning surfaces and unblocking drains is usually perceived as a rather unwelcome chore. This is especially true if you're proud to live a sustainable lifestyle and do not want to use store-bought conventional cleaners. But fans of green living (and cleaning) don't need to despair. There are plenty of easy and very useful sustainable cleaning hacks that you can draw on when you cannot or do not want to buy an expensive eco-friendly cleaner, but want to keep it green at the same time.

## How to Treat Stains Naturally

Even unusually stubborn stains can be treated using all-natural remedies. Hydrogen peroxide is an eco-friendly alternative to chlorine bleach and, diluted, a great cleaning solution that will work wonders on most stains. For food stains, sprinkle some baking soda on the area and then spray a water and hydrogen peroxide solution on the stain. Let it soak for a while, and then wash as usual. This green solution will even get rid of wine stains if you let it soak for long enough.

White vinegar can also act as an effective stain remover pre-wash. But keep in mind to always test any cleaning solutions on a small area first to make sure you won't damage the fabric.

## How to Unblock Your Sink

As an outdoorsy person who puts a lot of emphasis on a sustainable and environmentally friendly lifestyle – but at the same time likes creature comforts – glamping is the perfect choice of holiday for me. It's low maintenance and

close to nature, but with many of the perks that usually only hotel accommodation offers.

Last time I embarked on a glamping trip, I stayed in a cabin close to the woods. It was lovely to have a bathroom and small kitchen area at my disposal whilst still being as close to nature as you can get, but unfortunately, that luxury was short-lived when the sink clogged up on my second day. I had to choose between getting in touch with the owners to have them take action, and figuring out how to unblock a sink myself.

As a firm believer in green cleaning, I remembered a homemade remedy to clear the drains. All I needed was baking soda, boiling water, and a cup of vinegar. Luckily, the cabin had all of these things in stock. If you want to try this green unblocking remedy, pour the baking soda down the drain, then follow this with a few cups of boiling water. The baking soda will react with the water and dissolve any gunk. If the sink is still blocked after that, repeat the process with baking soda and vinegar, and carefully plug the drain. Then clear the drain by pouring down more boiling water.

Taking matters into my own hand rather than contacting the cabin's owner saved me a lot of trouble – and time – so it's always good to be prepared and have some cleaning hacks like this one at the ready.

## **How to Clean Surfaces the Green Way**

Grease stains on kitchen surfaces are ugly. They seem to cling to kitchen surfaces like a magnet, and after you let them sit for a couple of hours, they can be tricky to remove. But if you've got vinegar and vegetable oil in your kitchen cupboard, you've already got yourself a highly effective surface cleaner to leave your kitchen sparkling. Spray vinegar onto the surface; let it sit for 15 minutes, then wipe off the surface with a cloth.

If there are still some greasy remains left after this first stain, it's time to treat grease with grease. Soak a paper towel in natural vegetable oil to scrub away especially stubborn stains. This should remove even the most persistent stains.
