

All You Need To Know About Turmeric

Turmeric has in recent years become very popular among those who care about good health, with recent research showing that there are many benefits from its use in the treatment of different health conditions like cancer and Alzheimer's disease.

Turmeric comes from the root of the *Curcuma longa* plant and has a tough brown skin and a deep orange flesh. It was often called Indian saffron because of that same deep yellow-orange color and, throughout its long history, has been used as a spice, healing remedy, and textile dye.

You can use turmeric in cooking on a regular basis for its health benefits or you can take it as a supplement.

Things to Remember When Using a Turmeric Supplement

- It should be 95% pure curcumin extract at around 50mg a tablet.
- It should also have a natural enteric coating, so the benefit is not lost by the time it reaches the upper intestine in your stomach.
- Turmeric is not easily absorbed on its own but with the right combination, you really start to see the benefits. It can be mixed with piperine, green tea, or ginkgo biloba extract. A few grains of black pepper or one twentieth to one-quarter of a teaspoon can boost turmeric's absorption by up to 2000%. One way to take the black pepper is with some good fat.
- You need some healthy fat with your turmeric anyway. This is because turmeric is fat-soluble. Coconut oil,

ghee, or extra virgin olive oil enable the curcumin to be directly absorbed into the bloodstream, through the lymphatic system while bypassing the liver. The less curcumin that is exposed to the enzymes and remains in a free form, the longer it stays in the body doing its good work.

- Finally, heat is an important component for improving absorption by increasing turmeric's bio-availability. It is harder to include heat if you take your dose as a supplement but easier to do so if you use turmeric in your cooking. Your health can benefit If you pop in a quarter to half a teaspoon of turmeric every time you cook something in your pan, added to a little warm healthy fat.
