CDC Says 94% of COVID-19 Deaths had Other Causes

The CDC has reported that 94% of deaths marked COVID-19 have other causes. On average, in the cases where COVID-19 was not the sole cause of death, 2.6 additional causes for death were reported.

It is very likely that in many of these cases COVID-19 was not the primary cause of death. In many cases, COVID-19 can exacerbate or worsen pre-existing health conditions. The total death count for COVID-19 is not the number of people who died because of COVID-19, but rather the number of people who tested positive for COVID-19 at the time of death.

> *Dr. Brown added that CDC and WHO documents show that the case fatality rate for influenza was similar to the coronavirus, implying that the lockdowns were pointless. His paper questions why the 2017-2018 influenza season in the United States did not "receive the same intensive media coverage as COVID-19."*

Many have accused both the WHO and the CDC of inflating numbers to make the pandemic appear worse than it actually is, with some saying the practice is for the sake of gaining control over the population. Public health and government officials have also come out and stated that the mortality rate for COVID-19 is actually much lower than numbers suggest.
