Celebrities Who Have Spoken Out Against Vaccines

Pharmaceutical companies are one of the biggest, if not the biggest, advertisers supporting mainstream news. Due to this reality, objective reporting can be hard to find. After all, no one wants to bite the hand that feeds them.

So when you hear about a celebrity being anti-vaccine or a celebrity speaking out against forced vaccines, they are often vilified. Like the rest of the population, their stand on the issue may not be black or white. Many who are labeled as anti-vaccine just want to see vaccines get cleaned up; they don't believe mercury, aluminum, formaldehyde or any other toxic ingredients should be included in vaccines. Many are alarmed by the number of vaccines given to children, the practice of giving multiple vaccines at once, and the industry's lack of liability.

Celebrities who publically question the safety or effectiveness of vaccines open themselves up to media attacks. They are often portrayed as stupid, anti-science, or dangerous to the public. And, since the public has become so polarized on this issue, any celebrity who openly criticizes the safety or efficacy of a single vaccine or vaccine ingredient risks alienating much of their fan base.

You might be surprised to learn what these celebrities have actually said or written about vaccines. Many "anti-vaccine" celebrities are actually better vaccinated than many of their critics. There are probably many more "anti-vaccine" celebrities, but these are the ones with the courage to speak out and deal with the backlash and the mainstream media spin.

Robert Deniro & *Vaxxed* Documentary:

> *Grace and I have a child with autism and we believe it is critical that all of the issues surrounding the causes of autism be openly discussed and examined. In the 15 years since the Tribeca Film Festival was founded, I have never asked for a film to be screened or gotten involved in the programming. However this is very personal to me and my family and I want there to be a discussion, which is why we will be screening VAXXED. I am not personally endorsing the film, nor am I anti-vaccination; I am only providing the opportunity for a conversation around the issue."*

Is Jenny McCarthy Anti-Vaccine?

Jenny McCarthy is arguably the most famous critic of vaccines. What's not commonly known is that she isn't all that opposed to them, but that isn't how she is portrayed by mainstream media. Wikipedia even calls her an anti-vaccine activist. The truth is, her views aren't black and white on the subject. She dares to question vaccine safety and the recommended vaccine schedule. She says, *"We need to get rid of the toxins, the mercury—which I am so tired of everyone saying it's been removed. It has not been removed from the shots."*

Jenny McCarthy has called for vaccine companies to develop less toxic vaccines with a safer schedule. She believes that a re-emergence of certain diseases will be the wake-up call we need in order to demand that vaccine companies make safer vaccines.

> *I am not anti-vaccine. …I'm in this gray zone of, I think*

> *everyone should be aware and educate yourself and ask questions. And if your kid is having a problem, ask your doctor for an alternative way of doing the shots.”*

Jenny McCarthy has pointed out how people paint her as anti-vaccine when in fact, she believes that vaccines are a good thing. She believes that people should do their own research and ask their doctors questions. Parents should look for alternatives to the current vaccines and a different schedule.

> *The ironic thing is my position has always remained the same. People just never listened to it. Literally, throughout the years, I have said the same thing over and over again. But people will only read headlines instead of looking back and seeing what I’ve been saying.”*

Jenny McCarthy has stuck to her position of making vaccines safer through the years, despite the attempts by mainstream media to paint her as a crazy anti-vaxxer.

> *I believe in the importance of a vaccine program and I believe parents have the right to choose one poke per visit. I’ve never told anyone to not vaccinate. Should a child with the flu receive six vaccines in one doctor visit? Should a child with a compromised immune system be treated the same way as a robust, healthy child? Shouldn’t a child with a family history of vaccine reactions have a different plan? Or at least the right to ask questions?”*

Even though she has always stuck to her position of making vaccines safer and parents exercising their right to choose an alternate vaccination schedule, people have continued to attack her and try to portray her as being anti-vaccine.

Aidan Quinn Says His Child is Vaccine Damaged

“She was a normal child,” Aidan Quinn says. “Way above normal, in fact. And then she received a vaccination. She got a 106 degree fever, she turned blue, and she woke up the next day a completely damaged child after that.” His daughter, Ava, was so severely damaged that she lives in a special care facility and comes home on weekends, where she has to be watched every second.

Kristin Cavalari Will Not Vaccinate Her Children

Kristin admitted on Fox News while she was pregnant with her second child that she does not plan to ever vaccinate them due to autism fears.

> *You know what, I’ve read too many books about autism, and the studies…There is a pediatric group called ‘Homestead’…or…shoot—‘Homestead’ or ‘Home First.’ Now I’m pregnancy brain, I gotta confuse them…but they’ve never vaccinated any of their children and they’ve never had one case of autism. And now, one in 88 boys is autistic which is a really scary statistic.”*
>
> *Here’s the thing: At the end of the day, I’m just a mom. I’m trying to make the best decision for my kid. There are very scary statistics out there regarding what is in vaccines and what they cause – asthma, allergies, ear infections, all*

kinds of things. And we feel like we're making the best decision for our kids."

Alicia Silverstone is Adamantly Anti-vaccine

Alicia Silverstone took her views about vaccinations and boldly laid them out in her book, The Kind Mama. Silverstone gave extensive parenting advice including suggesting that parents reconsider getting their children vaccinated. She tells parents that proper nutrition can block the diseases that vaccinations protect children from. She also said she has witnessed a child become autistic immediately after a vaccination.

> *While there has not been a conclusive study of the negative effects of such a rigorous one-size-fits-all, shoot-'em-up schedule, there is increasing anecdotal evidence from doctors who have gotten distressed phone calls from parents claiming their child was 'never the same' after receiving a vaccine," Silverstone writes in The Kind Mama. "And I personally have friends whose babies were drastically affected in this way."*

Billy Corgan is an "Anti-Vaxxer"

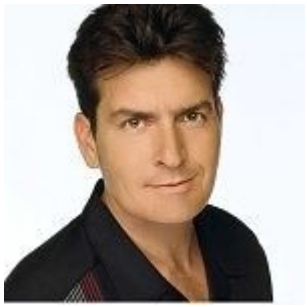

I say 'propaganda' because, in my heart, there is something mighty suspicious about declaring an emergency for something that has yet to show itself to be a grand pandemic," Corgan writes on his new blog. "Our American President Obama has declared a national emergency about this virus, which he in his own words said was, at this point, a preventative measure.

> *So, why declare an emergency if there isn't one?"*
>
> *"I do not trust those who make the vaccines, or the apperatus [sic] behind it all to push it on us thru fear. This is not judgment; it is a personal decision based on research, intuition, conversations with my doctor and my 'family'. If the virus comes to take me Home, that is between me and the Lord."*

Corgan is obviously anti-vaccine, and he also criticizes a mandatory vaccination law in Massachusetts, stating: "Soon, you won't even have the choice to live OR die as you wish!"

Charlie Sheen Appears to be 100% Anti-Vaccine

Dr. Peter Waldstein, a Bev Hills pediatrician, treated Charlie and Denise's two kids. Charlie was pissed that the doc was immunizing his kids because he holds a strict anti-vaccine stance. He considers vaccines to be poison. Charlie sent Waldstein a letter demanding he no longer treat the children. The doctor fired his own letter back saying he would treat them if need be, no matter what. After failing to stop his children's vaccinations by legal means, Charlie showed his disdain for vaccines by paying the outstanding $380 bill via a messenger with a big box filled with 7,600 nickels.

Donald Trump is Not Anti-Vaccine, Though He is Critical

I’m all for vaccinations, but I think when you add all of these vaccinations together and then two months later the baby is so different then lots of different things have happened. I really – I’ve known cases.” Donald Trump said. “I’ve seen people where they have a perfectly healthy child, and they go for the vaccinations and a month later the child is no longer healthy.”

Rob Schneider is Outspoken For Freedom of Choice and Vaccine Dangers

> *This policy of one size fits all Vaccine schedule for every child is as absurd as giving the same eye prescription glasses to every child. The fact is EVERY CHILD IS DIFFERENT and there is currently NO SYSTEM or thought to which child could be more susceptible to adverse reactions including permanent injury and death from any Vaccine or Vaccine ingredients.”*

We couldn’t find any proof that Rob Schneider is 100% anti-vaccine. He has made it clear that he’s against mandated vaccines, that vaccines can do harm, and that the CDC has covered up evidence that vaccines cause autism. He is also outspoken against current, conventional vaccine practices.

Mayim Bialik Wants Us To Choose Our Vaccines Carefully

Mayim Bialik, with a PhD in neuroscience from UCLA, is the most formally educated out of all of the celebrities mentioned in this article. Mayim Bialik, or Dr. Bialik, if your prefer, is known to be "anti-vaccine," but her views are a bit more conventional, and not nearly as "radical" as she may be portrayed.

> *The number of vaccines that you and I received when we were kids is a third or a fourth less than what kids get now. So my feeling is you can really do whatever you want, just like I get to do whatever I want, but I don't inherently think that no one should get the flu, for example. And that's my personal opinion."*

Jim Carrey is Not 100% Anti-Vaccine

Jim Carrey is not anymore anti-vaccine than Jenny McCarthy or Andrew Wakefield. He is clearly against vaccines including certain toxic ingredients that have been shown to be harmful and he is against mandatory vaccinations, the MMR vaccine, and the sheer number of vaccines recommended on the vaccine schedule.

> *"The truth is that no one without a vested interest in the profitability of vaccines has studied all 36 of them in depth. There are more than 100 vaccines in development, and no tests for cumulative effect or vaccine interaction of all 36 vaccines in the current schedule have ever been done. If I'm mistaken, I challenge those who are making such grand pronouncements about vaccine safety to produce those studies.*

"If we are to believe that the ruling of the 'vaccine court' in these cases mean that all vaccines are safe, then we must also consider the rulings of that same court in the Hannah Polling and Bailey Banks cases, which ruled vaccines were the cause of autism and therefore assume that all vaccines are unsafe. Clearly both are irresponsible assumptions, and neither option is prudent."

"In this growing crisis, we cannot afford to blindly trumpet the agenda of the CDC, the American Academy of Pediatrics (AAP) or vaccine makers. Now more than ever, we must resist the urge to close this book before it's been written. The anecdotal evidence of millions of parents who've seen their totally normal kids regress into sickness and mental isolation after a trip to the pediatrician's office must be seriously considered. The legitimate concern they and many in the scientific community have that environmental toxins, including those found in vaccines, may be causing autism and other disorders (Aspergers, ADD, ADHD), cannot be dissuaded by a show of sympathy and a friendly invitation to look for the 'real' cause of autism anywhere but within the lucrative vaccine program."

"With vaccines being the fastest growing division of the pharmaceutical industry, isn't it possible that profits may play a part in the decision-making? That the vaccine program is becoming more of a profit engine than a means of prevention? In a world left reeling from the catastrophic effects of greed, mismanagement and corporate insensitivity, is it so absurd for us to wonder why American children are being given twice as many vaccines on average, compared to the top 30 first world countries?"

Robert F. Kennedy Jr. is Adamantly

Anti-Mercury

Kennedy is an environmental attorney who has been tirelessly working to remove pollutants like mercury from our rivers and streams and now our vaccines. He has presented an impressive body of scientific evidence before Senator Barbara Mikulski, who brushed him off. She suggested that Kennedy bring his evidence to Sen. Bernie Sanders who "cares about brain health." Mikulski made it readily apparent that the argument that mercury causes harm doesn't interest her. It has consumed Kennedy for decades.

Kennedy has argued that if mercury was dangerous enough to remove from some vaccines, why isn't it dangerous enough to remove from all vaccines? He also accuses the federal government of knowing and ignoring the dangers of mercury in vaccines. He openly accuses the CDC of blatant corruption. When the CDC says vaccines are safe, Kennedy argues that we can't trust them.

> *They get the shot, that night they have a fever of a hundred and three, they go to sleep, and three months later their brain is gone," Kennedy said. "This is a holocaust, what this is doing to our country."*

His comparison of vaccine damage to the holocaust offended many people. There was a public outcry over his poor choice of words. Kennedy stated,

> *I want to apologize to all whom I offended by my use of the word holocaust to describe the autism epidemic. I employed the term during an impromptu speech as I struggled to find an expression to convey the catastrophic tragedy of autism which has now destroyed the lives of over 20 million children and shattered their families."*

Bill Maher is Anti-Flu Shot and "Pro-Common Sense"

Maher has clearly spoken out against the flu shot, but states that he is not an anti-vaxxer, thoough he does question the current vaccine schedule.

> *I'm not an anti-vaxxer; I never have been. I'm an anti-flu shot guy. I think that's bullsh*t and I think the fact that it was 23 percent effective this week bears that out. But if Ebola was airborne, I'd get the vaccine tomorrow."*

Robert Rodriguez Says Meeting Dr. Andrew Wakefield Changed Our Lives

> *We are forever grateful. His wise and measured advice about vaccinations helped us dodge a bullet . . . Our fourth son [had] multiple allergies and repeated infections . . . We now fully realize [he] would have been a victim of immune overload had we followed the regular vaccine schedule . . . [He] is [now] bright and healthy . . . This book provides a terrifying insight into what has been happening behind the scenes as efforts redouble to silence Dr. Wakefield . . . It is a wake-up call to those who think [he] is anything other than a modern day hero fighting for all of our children."*

Conclusion

Most of the celebrities mentioned in this article are not anti-vaccine, but rather pro-safety. Objections to the number of vaccines, or toxic ingredients are more common than objections to the practice of vaccination. Check out *How To*
