

# Researcher Says 5g May Cause Cancer After All – Increased Types of Head and Neck Tumors

Joel Moskowitz is a University of California, Berkeley, public health researcher. He says we don't yet understand the risks and we need more study before we continue with 5G infrastructure.

*The technology is coming, but contrary to what some people say, there could be health risks*

*Joel Moskowitz – Scientific American*

Moskowitz's says that there isn't any research on the health effects of 5G, but he rightfully points to a swathe of studies that indicate existing 2G and 3G signals could be harmful.

*Meanwhile, we are seeing increases in certain types of head and neck tumors in tumor registries, which may be at least partially attributable to the proliferation of cell phone radiation. These increases are consistent with results from case-control studies of tumor risk in heavy cell phone users.*

*Joel Moskowitz*

Moskowitz wants regulators to listen to the 250 doctors and scientists who recently signed a petition for a moratorium on the 5G infrastructure until the health implications are better understood.

## ***Balancing Our Hormones***

The problem with 5G is that it's not just one thing. Increasing amounts of cancers and other illnesses are caused by a worsening diet, disconnect with nature, vaccines, and other toxic pharmaceuticals, cellular signals, and other EMFs (not to mention Elon Musk's earth-wide WIFI), GMOs, glyphosate, plastic residues – it's all an accumulative effect. This allows conspiracy theories to run rampant, diluting reasonable concerns and arguments, while the companies that force this tech upon us absolve themselves by simply pointing their finger at all of the other toxicities that came to be with the same crony capitalism. What's next? All we can say is vote with your dollars, vote any time you can, eat right, and keep your gut healthy.
