

Researcher Studying COVID-19 Found Dead

Over the weekend a medical researcher reportedly on the verge of a new coronavirus discovery was shot and killed over the weekend. Bing Liu, 37, was found inside his home in North Pittsburgh on Saturday. Shortly after Liu was found, the body of Hao Gu was found shot dead inside his car less than a mile from Liu's home. Some have reported Gu shot Liu before taking his own life, reporting this as a murder-suicide. A motive is still unknown at this time.

Liu had a Ph.D. in computational science from the National University of Singapore and worked as a research associate at the University of Pittsburgh. Liu was reportedly close to making a significant discovery about COVID-19, with the university saying the following;

Bing was on the verge of making very significant findings toward understanding the cellular mechanisms that underlie SARS-CoV-2 infection and the cellular basis of the following complications,

Researcher 'on verge of making very significant' coronavirus findings shot to death
