

Why We Will Be Better Off With RFK Jr. As Our Secretary Of Health and Human Services

Xavier Becerra is currently the 25th secretary of Health and Human Services. He was born to working class parents, and has stated that his childhood witness to the struggles of the working class has driven his career ambitions to reform healthcare by establishing universal healthcare for all Americans. He promised to achieve this by building on the Affordable Health Care Act. More specifically, he promised as part of the Biden administration's agenda, to lower prescription drug costs and lower health insurance costs. Has he kept these promises and what have been the results of their implementation?

We at OLM have extensively exposed the corruption of Big Pharma and have explained precisely how pharmaceuticals damage the body in our articles such as; Some Antibiotics May Blind, Cripple, Or Kill You, Why I Stopped Taking Prescription Drugs, HyperTension; How To Lower Your Blood Pressure Quickly And Naturally, and Vaccine Propaganda Versus Vaccine Truth and more. The case in point for Xavier Beccra's promise to lower prescription drug prices, and how they were actually raised, is his promotion of Big Pharma's agenda.

Due to the public's false understanding of pharmaceuticals, their adverse effects on the body and the public's widespread misunderstanding of the effectiveness and necessity of pharmaceuticals, the American people also are ignorant of the true lasting effectiveness of natural alternative solutions that support the body's inbuilt immune system and regeneration. The American public will get drug prescriptions regardless of how much more expensive they become. The raising of prescription drug prices under Xavier Becerra was taking

advantage of the American public by profiting off their ignorance and benefiting Big Pharma. Herein is the proof of how Xavier did not lower prescription drug prices but instead they rose. According to a Issue Brief by ASPE (Assistant Secretary of Planning and Evaluation): Office Of Health Policy; the average price increases was larger in 2022 then in the months in previous years: it was 150 dollars per drug (10% increase) in January and in July 2022 it was 250 dollars per drug (7.8% increase). There were 1,216 products(drugs) which during the twelve month period between July 2021 and July 2022 exceeded the inflation rate of 8.5 percent for that time period.

Health insurance costs rose as well. According to Health System Tracker, health insurance costs rose from 4.785 trillion dollars in 2021 to 4.876 trillion dollars in 2023. The sharpest rise occurred between 2019 and 2020 in the declared Covid 19 pandemic but the second sharpest rise was from 2022 to 2023 from 4.679 trillion to 4.867 trillion dollars. Health insurance is sometimes used to cover emergency surgeries due to physical trauma, not only to purchase prescription drugs. Xavier Beccra promised to lower health insurance costs and instead they rose at the expense of Americans. The results of Xavier Beccra's career as Secretary of Health and Human services was only breaking every promise he made to protect and support the health of the American public and the results show with no doubt, America's need for someone who will keep their promises. RFK Jr. is capable of and has proven committed to doing exactly that.

Robert Francis Kenndy Junior is well known for his environmental activism and his health activism and advocacy. He's considered by the mainstream media to be a dangerous advocate and activist of misinformation, but what the mainstream media considers him to be highly controversial for is what makes him stands him out as exceptionally qualified. One of his qualifications for the position as Secretary of

Health and Human Services is his work at the nonprofit organization called Children's Health Defense. He has founded and was chairman of Children's Health Defense, an organization which provides education and news on vaccines, environmental toxins, the growing epidemic of chronic health conditions in America's children and more. Children's Health Defense's goal is to solve the health crisis plaguing our children as RFK Jr. states: "The greatest crisis facing America is the chronic disease epidemic in America's children."

News stories they cover include the coverup and censorship of the damages and injuries caused by the Covid vaccines, health conditions caused by exposure to toxins and the ongoing lawsuits against the companies and industries responsible, the truth behind vaccines, legal battles against the coverup of injuries and deaths caused by vaccines and more. Children's Health Defense also has scientific research projects such as their StateWide Databases (which has provided necessary information for their other projects); Clinical Informatics Program, Pediatrics Health Outcomes Initiative, Genomics Integration Project and more. Their Statewide Databases consist of the granted mediated and provisional access to the Florida Medicaid database. Their other projects consist of the following; The Clinical Informatics Program was started by Dr. Hooker to keep track of and study the medical record of patients who have been vaccinated and those who have not. The Pediatrics Health Outcomes Initiative was started by Dr. Paul to study children who were vaccinated from birth till 18 years of age and those who have not to compare the differences in the children's health. The Genomes Integration Project has both scientists at Children's Health Defense and scientists: Ulrike Kaemmer MD, and Kevin Mc Kernan Phd, investigating the integration of the spike protein code from the Covid vaccine into the human genome and the resulting effects. All these projects pursue what the mainstream medical community will not: actually studying the results of accepted allopathic medicine in peoples' health versus those who have not

received such “necessary treatment”.

Donald Trump has said he would put RFK Jr. in charge of the public health agencies and asked RFK Jr. three things of him as Secretary of Health and Human Services: One, to clean up the corruption at the agencies, particularly the conflicts of interest that have turned those agencies into captive agencies for the Big Pharma industry, the Big Food industry and the other industries that they’re supposed to be regulating. Two, to return those agencies to the gold standard of science, of empirically based, evidence based medicine that they were once famous for. Number three is to make America healthy again, to end the chronic disease epidemic and that Trump wants to see measurable, concrete results within two years. In two years he wants to see measurable results in the diminishment of the chronic disease epidemic in America’s children. We at OLM absolutely believe RFK Jr. will fulfill these promises with the same relentless determination he had founded and accomplished at Children’s Health Defense with.
